

Appln. No. 10/761,988
Amendment dated April 6, 2007
Reply to Office Action mailed February 9, 2007

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims (deleted text being struck through and added text being underlined):

1. (Currently Amended) A powerline networking device comprising:

a powerline plug configured and arranged to provide power and network connectivity to and from a power grid;

a plurality of powerline outlets in electrical communication with the powerline plug, the plurality of powerline outlets configured and arranged to provide power and powerline networking connections to devices plugged into any of the plurality of powerline outlets; and

a networking device between the powerline plug and each of the plurality of powerline outlets, the networking device including logic configured to isolate the plurality of powerline outlets from network traffic on the power grid;

wherein the logic configured to isolate the plurality of powerline outlets from network traffic isolates the powerline outlets without removing power from the plurality of powerline outlets.

2. (Original) A powerline networking device in accordance with Claim 1, further comprising:

a surge suppression device between the powerline plug and the plurality of powerline outlets.

3. (Original) A powerline networking device in accordance with Claim 1, further comprising a housing, and wherein the powerline plug and the plurality of powerline outlets are attached to said housing, and said network device is within the housing.

Appln. No. 10/761,988
Amendment dated April 6, 2007
Reply to Office Action mailed February 9, 2007

4. (Original) A powerline networking device in accordance with Claim 1, wherein the network device comprises logic configured to enable the network device to function as a device selected from the group consisting of a network hub, a network router, a network switch, and combinations thereof.

5. (Previously Presented) A powerline networking device comprising:

a powerline plug configured and arranged to provide power and network connectivity to and from a power grid;

a plurality of powerline outlets in electrical communication with the powerline plug, the plurality of powerline outlets configured and arranged to provide power and powerline networking connections to devices plugged into any of the plurality of powerline outlets;

a networking device between the power line plug and each of the plurality of powerline outlets, the networking device including logic configured to isolate the plurality of powerline outlets from network traffic on the power grid; and

wherein the network device comprises logic configured to enable the network device to define a subnet including only devices plugged into the plurality of powerline outlets;

wherein any devices plugged into the powerline outlets on the subnet are isolated from network traffic on the power grid.

Appln. No. 10/761,988
Amendment dated April 6, 2007
Reply to Office Action mailed February 9, 2007

6. (Previously Presented) A powerline networking device comprising:

a powerline plug configured and arranged to provide power and network connectivity to and from a power grid;

a plurality of powerline outlets in electrical communication with the powerline plug, the plurality of powerline outlets configured and arranged to provide power and powerline networking connections to devices plugged into any of the plurality of powerline outlets;

a networking device between the power line plug and each of the plurality of powerline outlets, the networking device including logic configured to isolate the plurality of powerline outlets from network traffic on the power grid;

logic configured to enable firewall, data encryption, selective parental controls, and combinations thereof; and

logic configured to present a user interface and to allow a user to configure said firewall, data encryption, selective parental controls, and combinations thereof.

7. (Previously Presented) A powerline networking device comprising:

powerline plug means for providing power and network connectivity to and from a power grid;

powerline outlet means in electrical communication with the powerline plug means, the powerline outlet means for providing power and powerline networking connections to devices plugged into powerline outlet means; and

networking means between the powerline plug means and the powerline outlet means, the networking means for isolating the powerline outlet means from network traffic on the power grid;

wherein the networking means isolates the powerline outlets without removing power from the plurality of powerline outlets.

Appln. No. 10/761,988
Amendment dated April 6, 2007
Reply to Office Action mailed February 9, 2007

8. (Original) A powerline networking device in accordance with Claim 7, further comprising:

surge suppression means between the powerline plug means and the powerline outlet means.

9. (Original) A powerline networking device in accordance with Claim 7, further comprising enclosure means, and wherein the powerline plug means and the powerline outlet means are attached to said enclosure means, and said networking means is within the enclosure means.

10. (Original) A powerline networking device in accordance with Claim 7, wherein the networking means is further for functioning as a device selected from the group consisting of a network hub, a network router, a network switch, and combinations thereof.

11. (Previously Presented) A powerline networking device comprising:

powerline plug means for providing power and network connectivity to and from a power grid;

powerline outlet means in electrical communication with the powerline plug means, the powerline outlet means for providing power and powerline networking connections to devices plugged into powerline outlet means;

networking means between the powerline plug means and the powerline outlet means, the networking means for isolating the powerline outlet means from network traffic on the power grid;

wherein the networking means comprises means for defining a subnet including only devices plugged into the powerline outlet means;

wherein any devices plugged into the powerline outlet means on the subnet are isolated from network traffic on the power grid.

Appln. No. 10/761,988
Amendment dated April 6, 2007
Reply to Office Action mailed February 9, 2007

12. (Previously Presented) A powerline networking device comprising:

powerline plug means for providing power and network connectivity to and from a power grid;

powerline outlet means in electrical communication with the powerline plug means, the powerline outlet means for providing power and powerline networking connections to devices plugged into powerline outlet means;

networking means between the powerline plug means and the powerline outlet means, the networking means for isolating the powerline outlet means from network traffic on the power grid;

means for enabling a firewall, data encryption, selective parental controls, and combinations thereof; and

means for presenting a user interface and allowing a user to configure said firewall, data encryption, selective parental controls, and combinations thereof.

13. (Previously Presented) A powerline networking device in accordance with Claim 1, wherein the networking device is configured to create a subnetwork among any devices connected to the plurality of powerline outlets, the networking device blocking data on the powerline from reaching the subnetwork.

14. (Previously Presented) A powerline networking device in accordance with Claim 7, wherein the networking means is configured to create a subnetwork among any devices connected to the powerline outlet means, the networking means blocking data on the powerline from reaching the subnetwork.

Appln. No. 10/761,988
Amendment dated April 6, 2007

15. (Currently Amended) A powerline networking device ~~in~~
~~accordance with Claim 1, comprising:~~

a powerline plug configured and arranged to provide power and
network connectivity to and from a power grid;

a plurality of powerline outlets in electrical communication with the
powerline plug, the plurality of powerline outlets configured and arranged
to provide power and powerline networking connections to devices plugged
into any of the plurality of powerline outlets; and

a networking device between the powerline plug and each of the
plurality of powerline outlets, the networking device including logic
configured to isolate the plurality of powerline outlets from network traffic
on the power grid;

wherein the logic configured to isolate the plurality of powerline
outlets from network traffic does not isolate the powerline outlets from
power from the power grid.

16. (Cancelled)

Appln. No. 10/761,988

17. (Currently Amended) A powerline networking device ~~in~~
~~accordance with Claim 1, comprising:~~

a powerline plug configured and arranged to provide power and
network connectivity to and from a power grid;

a plurality of powerline outlets in electrical communication with the
powerline plug, the plurality of powerline outlets configured and arranged
to provide power and powerline networking connections to devices plugged
into any of the plurality of powerline outlets; and

a networking device between the powerline plug and each of the
plurality of powerline outlets, the networking device including logic
configured to isolate the plurality of powerline outlets from network traffic
on the power grid;

wherein the logic configured to isolate the plurality of powerline
outlets from network traffic does not prevent power from the power grid
from reaching the powerline outlets.
